PROFESSIONAL SUMMARY

Project Engineer with 2 years of experience in software development and technical problem-solving. Currently specializing in Linux device driver development, with expertise in kernel debugging, ARM Trusted Firmware, and UEFI.

EXPERIENCE

Project Engineer at Wipro Limited (June 2024 – present)

Expertise in Linux device driver development for Marvell semiconductor. Skilled in kernel-level debugging, root cause analysis, and resolving complex driver issues including IRQ conflicts and GPIO interrupt handling.

Experienced in ARM Trusted Firmware (ATF) integration, UEFI boot debugging, and SDK development across multiple versions.

Proficient in analysing and migrating kernel configurations for embedded systems.

Adept at ensuring Copyright/License compliance in source code and SDK components.

Expertise in DPDK for high-speed network packet processing.

Freelance Managed Network Expert at Chegg India (March 2023 – June 2024)

Providing high-quality solutions to students' queries in computer science and programming

EDUCATION

- **MTech (CSE) CYBER FORENSICS AND INFORMATION SECURITY -9.0 (CGPA)** **2023 -2025**
  Jawaharlal Nehru Technological University Hyderabad
- **B. TECH (Computer Science Engineering) – 7.71 (CGPA)** **2018 –2022**
  Malla Reddy Institute of Technology and Science

SKILLS

- Proficient in Python, Embedded c, MySQL, HTML, Unix
- Strong problem-solving and analytical skills
- Good verbal and written communication skills
- Ability to work in a team-oriented environment

PROJECTS

Deep Learning Ensemble for Credit Card Fraud Detection

- Built an ensemble model using LSTM, GRU, and MLP models for fraud detection
- Applied data resampling and preprocessing to manage imbalanced datasets
- Improved robustness using ensemble and stacking techniques
- Designed and implemented an ensemble deep learning model combining LSTM, GRU, and MLP architecture for real-time credit card fraud detection
- Implemented stacking and voting ensemble methods to improve prediction accuracy and reduce false positives
- Achieved significant improvement in detection rate while maintaining low false positive rates
- Built an interactive Stream lit web application for real-time fraud prediction

PAPER PUBLICATIONS

Controlling Ambiguity and Vagueness through Ai tools in writing the research articles
International Research Journal of Modernization in Science and Technology **September 2024**

TRAININGS & CERTIFICATIONS

- GitHub Copilot **May 2025**
- Core Java training from Naresh IT Technologies **December 2022 to March 2023**
- Python training from SSSIT Computer Education **March 2022 to June 2022**
